Copytrax... the technology to deliver excellence

A World Leader in
Digital Media Reproduction

A more responsive and more flexible service

For many years now, Copytrax has been developing high-speed inkjet based printing machines that have replaced the traditional silk screen approach. The modern digital inkjet approach offers a much cleaner, faster and more flexible solution than silk-screen.

This technology not only enables you to offer a more responsive and more flexible service, but also it will increase your productivity. The new PrintMaster will print on almost any material and the quality of the print is most impressive.”

The Copytrax PrintMaster employs Epson Micro Piezo head technology using a variable-sized droplet format to ensure superb colour management and a high-resolution performance. The PrintMaster can print a broad range of media up to a size of A3+ 330mm by 480mm.

A more modern and more effective way to work

- whether you are an established printer, marketing company or just setting up, the Printmaster will enable you to print on a range of media for high quality short run, i.e. USB drives, Pens, mobile phone casings & custom packaging. It is ideal for short run Digital Print businesses and short run screen-printing. This technology demands very little setting up, uses very few consumables and makes small runs and next-day deliveries far more viable. On top of this, even for mid to high volume projects, digital inkjet is simply **a more modern and more effective** way to work. The speed and finish is hard to beat.

Expertise you can rely on...

At Copytrax, we work with printers and duplicators around the world, helping them provide a high quality service that keeps customers coming back.

If you need help or advice whilst getting started, or wish to expand your current business, please do not hesitate to get in touch, we'll be pleased to hear from you!
